

Essentia[®] Universal shade

Ultimate simplification for all posterior restorations

GC

Essentia® Universal shade

THE solution for all posterior restorations

Essentia® Universal shade offers complete flexibility and simplicity for all posterior restorations.

Just one shade, with amazing blendability, lets you create aesthetic restorations with ease.

Essentia® Universal shade is now available in three full-strength viscosities, so you can select the perfect solution for each clinical indication. Choose between:

PASTE

INJECTABLE

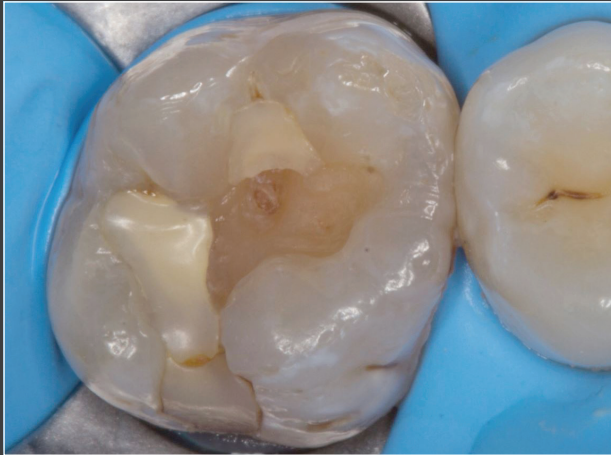

FLOWABLE

From cervical to occlusal restorations, all versions of Essentia® Universal shade have the high strength necessary for all cavity classes, without limitation.

One shade. Absolute simplicity.

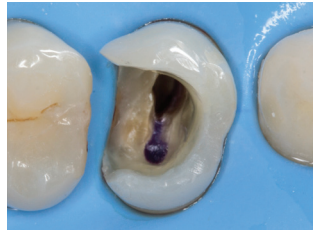

Dr. Bojidar Kafelov, Bulgaria

When GC introduced Essentia[®], it opened the door to a world of simpler restorative dentistry.

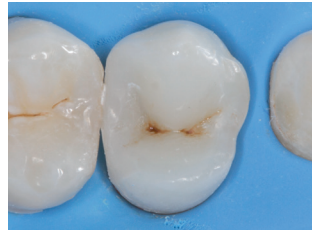

Now that door is thrown wide open with Essentia[®] Universal shade.

Three full strength viscosities

Essentia®

A direct approach was selected for this challenging post-endodontic case

Restoration with everX Posterior™ as a dentin core and Essentia Universal as the outer shell

Six-month recall showing good shade integration with the surrounding dental tissues

Dr Bojidar Kafelov, Bulgaria

Essentia® LoFlo

Air abrasion of the non-carious lesions

Restoration with Essentia® LoFlo Universal

Post-operative view after polishing

Dr Bojidar Kafelov, Bulgaria

Essentia® HiFlo

Preparation of the small Class I cavities

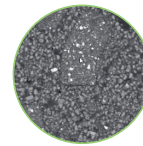

Restoration using Essentia® HiFlo Universal

Post-operative view showing a great blending with natural teeth

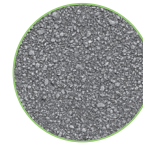

Prof. Joseph Sabbagh, Lebanon

Essentia® is a full-strength paste composite with a simplified one shade concept. Its Universal shade displays a great blending effect together with a packable-consistency **paste viscosity**, for easy placement and shaping.

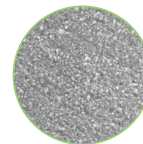

Based on a mix of pre-polymerised and ultra-fine fillers

Essentia® LoFlo is a full-strength injectable composite with **low flowability**, optimal when a thixotropic material is needed – for instance for cervical restorations. It promises minimal wear, ensuring long-lasting restorations, even on the occlusal surface.

Based on homogeneously dispersed 200nm strontium glass fillers

Essentia® HiFlo is a full-strength injectable composite with **high wettability**, perfect for easy adaptation to preparations and flowing into narrow cavities. It offers great handling properties, together with superior strength and a high radiopacity of over 300% (1mm %Al), facilitating the diagnosis of secondary caries.

Based on homogeneously dispersed 700nm barium glass fillers
