

Astringedent™ 15.5% FERRIC SULFATE

- The “Classic” hemostatic agent for profound hemostasis
- Stops moderate bleeding
- Eliminates sulcular fluid contamination for optimal bonding
- Decreases costly impression remakes

Astringedent hemostatic is an aqueous 15.5% ferric sulfate hemostatic solution with a pH of ~1.0.

Astringedent hemostatic solution is well suited for a variety of dental and oral surgery procedures to arrest bleeding. Astringedent hemostatic can be used to prevent leakage caused by sulcular fluid contamination during direct bonding procedures.

Listed as a “CAN’T LIVE WITHOUT” product by a prominent independent research institute.²

Note: ViscoStat™ and Astringedent hemostatic agents should be used with a Metal Dento-Infusor™ tip. The plastic Blue Mini™ Dento-Infusor™ tip should be used when you are dealing with newly healed epithelium, as the softer tip is slightly less aggressive.

Astringedent™ X 12.7% IRON SOLUTION

- Clinicians “go-to” hemostatic for all case situations
- Stops minor to severe bleeding

Astringedent X hemostatic is an aqueous 12.7% iron solution that works quickly to stop bleeding in seconds. It contains equivalent ferric sulfate and ferric subsulfate. **Note: Diluted Astringedent X hemostatic does not equal ViscoStat or Astringedent hemostatics.**

Use when a stronger, more potent hemostatic is required and when the attainment of quality hemostasis may be more challenging (e.g., in cases of difficult-to-stop, problem bleeding).

Courtesy of Dr. Bruce LeBlanc.

Astringedent X hemostatic and Metal Dento-Infusor tip facilitate profound hemostasis, even with challenging cases.
