

# FreshBreath™

Advanced probiotics for a healthy mouth and throat

## Bad Breath / Halitosis

One of the most common causes of bad breath or Halitosis is due to the existence of bacteria in our mouth. Even if you brush and floss teeth daily, food particles can remain in your mouth, promoting bacterial growth between teeth, around the gums, and on the tongue. As bacteria break down food particles, they can release unpleasant smelling gas. If this is in high concentrations, those odours are detectable by other people as bad breath.

Brushing teeth and using anti-bacterial mouthwash will eliminate some of the bacteria and mask the odour for a short time but for halitosis, a more thorough approach is required to get the balance of bacteria right.

## BLIS K12™ for Oral Health and Breath Support

FreshBreath kit contain BLIS K12™ - an advanced probiotic strain of *Streptococcus salivarius*. BLIS K12™ is proven to prevent bad breath by crowding out the bad smelling bacteria and promoting healthy bacteria in the mouth.

It works in 2 ways:

1. The 'good' bacteria crowd out the 'bad' bacteria that cause halitosis
2. The 'good' bacteria (*S. salivarius* K12) produce bacteriocins that provide protection against the bad bacteria coming back: think of it like a forcefield around your oral cavity.

BLIS FreshBreath™ Kit is clinically researched to promote and maintain fresh breath – not temporarily mask it. With a combination of BLIS K12™ lozenges, high-strength anti-bacterial mouthwash and a tongue cleaner, this easy to follow 4 week program will significantly improve breath odour for halitosis sufferers.

CONTAINS  
**BLIS**  K12™

The logo for BLIS K12, consisting of the word "BLIS" in a bold, blue, sans-serif font, followed by "K12" in a similar font, all enclosed within a circular border. A small "TM" symbol is located at the top right of the circle.

# FreshBreath™

Advanced probiotics for a healthy mouth and throat
