

Tired of your small files buckling?

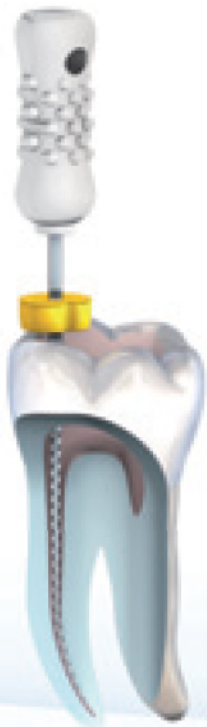

Introducing...Komets new **Patency File**

What is it:

- A Stainless Steel K-File that is **thermally hardened** for manual probing

Why it's special

- Its extra strength provides greater leverage which minimises file buckling
- Resilient strength is ideal for working in those hard calcified canals in the coronal third
- Sterile packed
- Includes **unique "012" size**; providing a useful bridging option between the large 50% step-up between sizes "010" and "015"
- Complete with special depth markings which clearly show up on radiographs

21mm - In 5 sizes & assorted pack K-175216540__
