# What is Connect Dental?

With the fast moving nature of digital technology in dentistry, it's critical that the investments you make in new equipment and solutions are well integrated. We are excited to introduce to you **Connect Dental** the brand under which Henry Schein's complete CAD/CAM and digital scanning portfolio will sit.

**Connect Dental** is our platform for digital dentistry which integrates a wide choice of innovative, scalable technologies into every step of the clinical workflow. This is complimented by the accompanying service, training and education programs offered by our support teams to ensure you get maximum benefit from your investment.

Henry Schein has many suppliers who are market leaders in each of the main areas of CAD/CAM. The emphasis is on providing you, the dentist and laboratory, with open sourced independent products at the right price with the ability to integrate with almost all of the latest technology available in the market today.

Our Digital Technology Speciality Catalogue has been designed to be a trusted resource highlighting the latest technologies and materials available in the New Zealand market.

**ConnectDental - the journey from the Digital Impression to the Final Restoration**

We will show you the possibilities and opportunities for dental practices and laboratories to connect via a digital workflow from start to finish. Henry Schein offer a comprehensive selection of digital solutions and materials supported by our extensive CAD/CAM Team.

**Your advantage with Connect Dental**

- Digital Workflow:** With individual and team oriented solutions
- Business Solutions:** Consultative services and application support to assist you in choosing the right solutions for your needs
- Education:** Training and support for the latest technology and digital workflows
- Materials:** Access to the latest all-ceramic aesthetic solutions
- Milling:** CAD/CAM equipment capable of utilising a wide array of materials quickly and conveniently
- Open Architecture:** Opportunity to integrate CAD/CAM componentry from various manufacturers

## Dental Practice

By using Digital Impression Systems

**DENTISTS CAN:**

**CONNECT BETTER**  
WITH THEIR LABORATORY

**IMPROVE THE COMFORT**  
OF THE DENTAL EXPERIENCE  
FOR THEIR PATIENTS

**INCREASE EFFICIENCY AND**  
**PRODUCTIVITY**  
IN THEIR PRACTICE

**REDUCE THE COST**  
OF DENTAL CONSUMABLES

## Dental Laboratory

### DENTAL LABORATORIES

are embracing CAD/CAM Systems as a part of their workflow

OF CROWN AND BRIDGE LABORATORIES IN NEW ZEALAND ARE ALREADY EQUIPPED WITH AT LEAST **ONE CAD/CAM SOLUTION**

OF LABORATORIES ARE PLANNING TO PURCHASE A **SCANNER** IN THE NEXT TWO YEARS\*

## Chairside Scanners

Planscan

PLANMECA

Integrated intraoral scanner for 3D digital impressions. This high-performance intraoral scanning solution can also be connected to a laptop. The system provides excellent usability and supports an ideal digital treatment workflow.

- Real-time, quick scanning with sound guidance
- Accurate results from a single indication to a full arch
- Comfort for the patient and dentist
- Open STL file format
- True dental unit integration
- Works with a laptop – easy to share
- Autoclavable and changeable tip in different sizes for impeccable infection control
- Enhanced moisture control with anti-fogging technology
- Powder-free scanning

TRIOS 3

Available in  
Wireless

3shape

The new 3rd generation TRIOS® is a three in one digital impression solution. An intraoral scanner for fast and easy 3D colour impression taking; an integrated intraoral camera, so there's no need to purchase one separately, and shade measurement while you scan, for more accurate and predictable results. TRIOS® enables you to be more efficient, more precise and your patients more comfortable.

- High accuracy capture in colour
- Automatically measures the teeth shades as you scan
- HD Photos for instant case images
- Clinical scan validation
- Small footprint - can be placed where space is very limited
- Spray and powder-free for optimal accuracy and patient comfort
- Optimised Ultrafast Optical Sectioning software - now 40% faster
- Autoclaveable tip with antimist heater

**Specialist applications include:**

- Orthodontics
- Implants
- Endodontics (post and core)

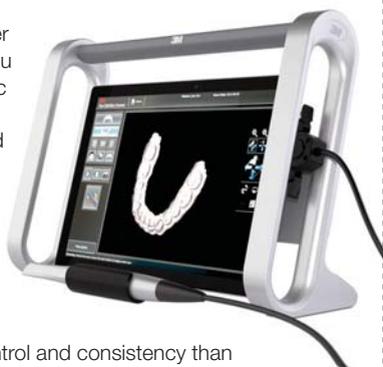

Available in Pod, Cart and Chair Integration formations

## True Definition Scanner

3M

**Accurate. Precise.**

The 3M True Definition Scanner supports open STL files, so you can work with your orthodontic lab, design and mill chairside, or share files with other trusted partners for expanded clinical solutions. And, because your digital impressions are generated by 3M's 3D-in-motion video technology, they'll feature extraordinary detail with industry leading accuracy - providing more control and consistency than traditional processes.

- **Accuracy:** Proven to be more accurate—and more consistently accurate - than other leading intraoral scanners
- **Ease of Use:** Innovative design for fast, easy and comfortable scanning
- **Affordability:** Low cost of entry into intraoral scanning

## TRIOS 3 Mono

3shape

**New entry-level version of the award-winning TRIOS 3**

TRIOS 3 Mono delivers the same documented-accuracy, insane speed and ease of use of all TRIOS intraoral scanners but takes digital impressions without colour.

TRIOS Mono delivers many of the same features as the TRIOS 3 colour models including:

- TRIOS documented-accuracy, insane speed and ease of use
- The widest range of indications and delivers texture and stone model scans plus HD photos
- Doctors can offer same-day dentistry using optional 3Shape Practice Lab
- Available in Pod configuration with Pen or Handle

The TRIOS 3 Mono is upgradable to a TRIOS 3 colour model at any time. When upgrading to a TRIOS colour model, the upgrade includes RealColor™ scanning, digital shade measurement and an integrated intraoral camera.

# PLANMECA

## Planmeca Emerald™

# The crown jewel of intraoral scanning

*The brand new intraoral scanner Planmeca Emerald™ is a small, lightweight, and exceedingly fast scanner with superior accuracy. Taking digital impressions has never been as easy. It is the perfect tool for smooth and efficient chairside workflow.*

**Only  
183 grams!**

### **Superior accuracy with outstanding speed**

Scanning is extremely fast and easy making the experience comfortable for the patient and doctor alike. The accuracy of the impressions meets the most demanding imaging needs with a fully integrated colour scanning option.

### **Small and lightweight design**

The lightweight structure and user-friendly form of the scanner ensure optimal ergonomics. With the active antifog feature of the scanner's tip mirror, visibility is always clear. The compact size and seamless design of the scanner guarantee a great patient experience.

### **Exceptional ease-of-use**

The Planmeca Emerald makes workdays smooth and efficient with fast and accurate digital impressions. Easy and simple plug-and-play solution. The scanner is compatible with Planmeca Romexis® and Planmeca PlanCAD® Easy software suites.

### **Impeccable infection control**

Impeccable infection control is guaranteed with the autoclavable tip and seamless design of the scanner. The dental unit integration enables hands-free operation with the foot control.

# Fits your hand. Fits your budget. Fits your practice.

## 3M™ Mobile True Definition Scanner.

The first mobile intraoral scanner that operates solely on a tablet.

### **Fits your hand**

Compact, ergonomic design enables enhanced patient engagement and the freedom to move between operatories.

### **Fits your budget**

A cost-effective entry into digital dentistry.

### **Fits your practice**

Elevates care by producing a clear, easy-to-understand visual representation of the anatomy to help increase patient acceptance.

# CAD/CAM Equipment

## Model Scanners

### E Scanners

Now any lab can be digital.

In today's digital era, a solid CAD/CAM system has become essential for even the most cost-conscious labs. With its new affordable E scanners, 3Shape makes advanced CAD/CAM accessible to labs of all sizes while raising the bar for entry-level solutions.

- **Best value for money**  
Get advanced scanning features and CAD design workflows at an affordable price
- **Fast scanning**  
High scan speeds let you complete more cases in less time
- **Latest technologies**  
5 MP cameras, Blue LED and multi-line scanning for optimal detail capture and accuracy
- **Auto-start for high productivity**  
No need to press a button. Starts scanning as soon as you place the model inside
- **Reliable impression scanning**  
Scan impressions directly without pouring a model, saving time and costs

### E1

3shape

Essential scanning to digitise your lab.

- 2 x 5 MP cameras, Blue LED Multiline
- Accuracy (ISO 12836 / implant): 10 µm/12 µm
- Scan speed (arch): 40 sec
- Scan speed (die): 25 sec
- Scan speed (full arch impression): 130 sec
- Texture: n/a

### E2

3shape

Increased productivity and texture scanning

- 2 x 5 MP cameras, Blue LED Multiline
- Accuracy (ISO 12836 / implant): 10 µm/12 µm
- Scan speed (arch): 30 sec
- Scan speed (die): 20 sec
- Scan speed (full arch impression): 90 sec
- Texture: B&W

### E3

3shape

High performance and implant bar accuracy

- 2 x 5 MP cameras, Blue LED Multiline
- Accuracy (ISO 12836/ implant): 7 µm/10 µm
- Scan speed (arch): 24 sec
- Scan speed (die): 18 sec
- Scan speed (full arch impression): 80 sec
- Texture: Colour

# CAD/CAM Equipment

The D2000 and D1000 multi-line scanners capture multiple scan lines in a single shot for high speed. All-in-One scanning on the D2000 enables users to capture models, all inserted dies, and occlusion information with a single scan.

## D1000

3shape 

### Ultra high productivity and die-in-model scanning

- 4 x 5 MP cameras, Blue LED Multiline
- Accuracy (ISO 12836 / implant): 5 µm/8 µm
- Scan speed (arch): 16 sec
- Scan speed (die): 15 sec
- Scan speed (full arch impression): 65 sec
- Texture: Colour
- Scanning strategy: Die in model

## D2000

3shape 

### All-in-one scanning for maximum volume throughput

- 4 x 5 MP cameras, Blue LED Multiline
- Accuracy (ISO 12836/implant): 5 µm/8 µm
- Scan speed (arch): 16 sec
- Scan speed (die): 15 sec
- Scan speed (full arch impression): 65 sec
- Texture: Colour
- Scanning strategy: All in one

## 3-Shape Model Scanner Comparison Chart

# The Wait for Reliable and Affordable Wet Milling is Over

The all-new  
**DWX-4W**  
Wet Dental Mill  
CAM software included

## Introducing the New DWX-4W

The new DWX-4W Wet Dental Mill is an affordable and reliable restoration option that goes beyond dry milling to quickly and precisely cut glass ceramic and composite resins. It offers high-speed production of up to three pin-type blocks at a time and combines 4-axis undercut milling with a 4-station automatic tool changer. Combine the new DWX-4W with the new DWX-51D dry milling machine to offer a complete, uninterrupted restoration solution. Backed by a comprehensive 3 year warranty and drawing on over 30 years of engineering technology, Roland DWX devices are a proven solution with over 3400 Roland dental milling devices in the market today.

Combine the DWX-4W with the DWX-4 or DWX-51D for a complete restoration solution

# PlanMill® 40S

**PlanMill® 40S** is the brand new unit from Planmeca designed for fast and accurate milling directly at a dental clinic.

With its enhanced performance and numerous smart features, the unit offers the most advanced milling experience on the market.

## Milling Materials:

- Ceramic Materials
- Hybrid Ceramics
- Resin-based Materials

## Features and Benefits

- High precision milling unit
- Two-spindle system with high-speed motors (50,000 rpm)
- Different strategies for different materials – optimised speed without compromising quality
- Perfect milling even for ultrathin veneers
- Tool changer for 6 burs
- Automated tool quality control after each milling
- Computer-controlled operations – the system tells the user when to change tools, water, etc.
- The mill independently controls the milling jobs - no connections needed from the scanning station.

CAPABLE OF **WET MILLING**

**PLANMECA®**

# CAD/CAM Equipment

## Milling Units

### DWX-4

Roland®

The Roland DWX-4 is the industry's most user-friendly desktop dental milling system, making it easier than ever to produce precise crowns, copings, bridges and hybrid abutments. Like its larger family member, the DWX-50, it is capable of milling a wide variety of materials, including new hybrid ceramics with precision.

Affordably priced, the DWX-4 is ideal for any lab just getting started in digital dentistry, labs who no longer wish to outsource production and labs that need a second device for urgent jobs. With the DWX-4 dental milling system, you can mill a single crown or bridge on demand, quickly and economically.

- Compact dental milling system
- 2-station automatic tool changer
- 4-axis simultaneous lead/worm screw driven machining
- Mills wax, zirconia, PMMA and popular new resins in standard blocks and pin-type materials
- EasyShape™ software supports milling strategies for new pin-type materials, including:
  - 3M™ ESPE™ Lava™ Ultimate Restorative\*
  - VITA ENAMIC® hybrid ceramic

Dry Milling of Blocks

### DWX-4W

Roland®

DWX-4W is the latest in Roland technology that goes beyond dry milling to quickly and easily wet mill popular glass ceramic and composite resins with precision and reliability. The DWX-4W wet mill cuts precision crowns, bridges, inlays and onlays, and veneers. Simultaneous 4-axis milling and other special features provide unattended milling. Up to three standard pin-type blocks can be loaded for increased efficiency.

Wet Milling of Blocks

### DWX-51D

Roland®

Designed for the effortless production of dental prosthetics, Roland DG dental mills deliver quality, efficiency and value in a compact, user-friendly device. Ideal for labs or office environments, the open architecture of the DWX series allows you to work with the latest materials, CAD/CAM software and scanners, without the need to rely on a single source.

With a host of automated features and precise 5-axis milling, the DWX-51D is the perfect solution for labs wanting to increase production or those looking to get into digital milling for the first time.

- Capable of 5-axis simultaneous machining to achieve complex cuts
- Precision milling of Zirconia, Wax, PMMA, Composite resin, PEEK and Gypsum
- 10-station automatic tool changer with tool length sensor
- Diagnostic notification system alerts user of machine status

Dry Milling of Discs

### DWX-52DC

NEW!

Roland®

The DWX-52DC 5-axis dental milling machine features an Automatic Disc Changer (ADC) to streamline milling of a wide range of prosthetic materials. Automated operation allows for unattended production and milling overnight to drastically boost efficiency. Designed as the optimum solution for dental laboratories moving into the digital realm as well as labs seeking to boost production capacity, the DWX-52DC is leading the way into a new era of dental fabrication. Capable of milling Zirconia, Wax, PMMA, Composite Resin, PEEK and Gypsum.

Dry Milling of Discs

# CAD/CAM Equipment

## PlanMill® 40S

**PLANMECA**

PlanMill® 40S is the brand new unit from Planmecca designed for fast and accurate milling directly at a dental clinic. With its enhanced performance and numerous smart features, the unit offers the most advanced milling experience on the market.

Wet Milling of Blocks

## N4 Impression

**vhf**

The N4 Impression is a wet grinding machine for glass ceramics and composites which has been newly developed from scratch. Its highest precision and the quick drive units—common characteristics of all vhf machines—are combined here with a closed liquid cooling system in an extremely compact housing. So you will get first-class grinding results in the shortest time with the N4 Impression.

The cooling lubricant is led through eight liquid nozzles which are arranged at the spindle and cools the whole tool evenly from the tip to the shank at all machining stages. The machine bed of massive aluminium cast facilitates highest stability and a low-vibration operation. Together with the flexible gaiter at the spindle it furthermore guarantees that all the liquid will remain solely in the working chamber of the machine. The removable liquid drawer under the working chamber also contains a filter mat for separating grinding particles.

Ideal for the practice laboratory.

Wet Milling of Blocks

## K4 Impression

Extremely compact design combined with uncompromisingly rigid construction ensures that you will achieve first-class results – even on extremely hard non-precious alloys.

CAM 4-K4 Impression includes automatic tool changer with six stations which enables a complete machining of the workpiece – from the initial rough machining up to the ultimate finishing – without manual intervention from the operator.

Dry Milling of Discs

## K5 Impression

**vhf**

**5** Axes    **1** Blank    **16** Tools    **Dry** Mill

With K5 Impression you will get a **five-axis dry milling machine** for an especially wide range of indications. The B axis with an extraordinarily great rotation range of up to  $\pm 35$  degrees and the fixing device for blanks with a thickness of up to 40 mm make sure that you can realise nearly any object that can be dry milled. The especially stable construction of K5 guarantees excellent machining results. Numerous comfort features like an automatic tool changer and a practical accessory drawer make working with K5 quick and efficient.

Dry Milling of Discs

# CAD/CAM Equipment

## CAM 5-S1 & S2 Impression

**vhf**

**5** Axes  
**8** Blanks  
**16** Tools  
Dry Wet &  
Mill Grind &

CAM 5-S1 Impression and CAM 5-S2 Impression are dental milling machines made by vhf with five simultaneously working axes. Due to the second rotary axis (B axis) with a rotation range of up to  $\pm 30$  degrees undercuts can be milled without any difficulty.

Both machines are prepared for connecting the wet grinding module. There are liquid nozzles already mounted at the spindle so that the cooling liquid can be applied straight to the tool tip. Therefore you can process approved glass ceramic types.

Besides the additional fifth axis, the S models distinguish themselves from the K models above all by their more powerful and more precise synchronous spindle and by the automatic tool changer for 16 tools.

In addition to the currently required tools, you can equip the tool changer with replacement tools. Thus you can continue working without interruption if a tool is worn out.

In order to create a solid basement for the highly precise five-axis mechanics, the machine bed of the S models consists of one single massive cast part. This makes these machines extremely stable with minimal exterior dimensions. Moreover, vibrations are reduced and the mechanics are optimally protected.

Capable of milling Zirlux, PMMA, Wax, glass ceramic nanocomposites and other zirconia materials.

### CAM 5-S2 Impression with blank changer for eight blanks

The model CAM 5-S2 Impression is supplementary equipped with a blank changer for eight blanks. The changing station with blanks is fitted via a smaller additional front cover. The blank for your milling job is inserted into the fixing device automatically when required.

Both machines come with DentalCam software that lets you choose the material and import STL files into the open programme.

Dry Mill (with Optional Wet Milling)  
Discs (Blocks Optional)

## Grinding Module for CAM 5-S1 & S2 Impression VHF

**vhf**

You do not need a new machine for wet grinding – just an external module and appropriate holders for the glass ceramic blocks for the Impression S models. The wet grinding module which regulates the liquid circulation is connected with two hoses for supply and drainage with the machine. From three liquid nozzles that are already integrated into the spindle block, cooling liquid will be directly targeted to the tip of the tool. Thus an efficient cooling is ensured during the whole grinding process.

The external wet grinding module has an integrated membrane pump and a refined system for air and liquid treatment. It dries the extracted air and filters the cooling liquid from grinding particles. The regularly used dry vacuum cleaner simply has to be connected to the wet grinding module instead of to the machine.

Due to the rigid construction of the Impression S models and the highly precise spindle you will achieve high-class results by using the cooling lubricant vhf Tec Liquid and the appropriate vhf grinding tools. For instance, it is possible to grind a fully anatomic crown from the materials IPSe.max® or VITABLOCS® Mark II within approximately 25 minutes.

For wet grinding vhf's range of tools includes a torus grinding tool with coarser grain size for roughing, as well as a fine-grained radius grinding tool for finishing the surface afterwards. These tools are also available as starter set.

## Furnaces

### SMART.FIRE Furnace

VITA

VITA SMART.FIRE is a firing unit developed specifically for dental practices for the crystallisation, glaze, stain, and corrective firing of all common chairside materials. Selecting the materials and starting the program are done in just one step. Optimally, customised material-specific programs are already pre-installed for simple firing. Thanks to its compact design, the firing unit can be set up easily and saves space in every practice.

#### Features/Benefits

- Intuitive use - material selection and program start in one step
- Organised menu navigation with self-explanatory program symbols
- Pre-installed programs for all common chairside materials
- Convenient use, thanks to its space-saving construction
- Reliable function through long-lasting firing technology
- Durable housing with sealed surfaces

V-DSF220

### Vacumat 6000 M

VITA

Premium ceramic furnace with surprising details and impressive reliability

The VITA VACUMAT 6000 M is a fully-automatic, microprocessor-controlled firing unit, ideal for all dental ceramic firing requirements. The furnace impresses with superb quality and aesthetics, and offers outstanding firing results, user safety and convenience. Thanks to its optimum ergonomic design, the furnace only takes up a minimum amount of space. Two integrated cooling trays support safe storage of fired objects, while the captivating design, available either in stainless steel or in one of six quality contemporary finishes, is a real eye-catcher for your work area.

In order to operate the furnace, you will need one or more VITA vPad control units.

V-6000SS

### Zyrcomat 6000 – Sintering

VITA

The Vita Zyrcomat 6000 MS is suitable for all high temperature sinter firings of any type of dental ceramic substructure materials, such as ZrO<sub>2</sub> and AL<sub>2</sub>O<sub>3</sub> (subscript 2's and 3)

With the latest features in the field of firing technology, the high-speed sintering furnace guarantees top quality and careful sintering with a cooling temperature down to 400°C in three freely selectable modes. The high speed mode can be used to sinter bridge substructures of up to 14units in 80 minutes. The furnace can be operated with the Vita vPad comfort, Vita vPad excellence or Vita vPad clinical control units.

V-ZYRCOMAT6000

### vPad Comfort – Controller

VITA

Vita vPad comfort works with Vita's Zyrcomat 6000 furnace and the Vacumat 6000 furnace. The control unit not only boasts an innovative and stylish design, it also offers an unprecedented level of operating convenience.

The 7 inch colour touchscreen with self-explanatory symbols and an integrated photo viewer offers convenient, intuitive "one touch" operation for controlling up to two Vita New Generation firing units. It has 500 customisable firing, pressing and sintering programs and has the ability to have up to four user profiles with write-protection for personal programs and custom settings.

V-PADC

# CAD/CAM Equipment

## Dust Collectors

### Cyclone Dust Collector

The Ray Foster Cyclone Dust Collector is a powerful and efficient dust collector for use in the dental laboratory, designed for trouble-free performance and heavy-duty operation. Quiet, portable and compact, the dust collector is ideal for under-the-counter operation.

#### Specifications

- Unit size 12" x 12" x 16.5" high
- 115 volt, 60 Hz standard
- 230 volt, 50/60 Hz
- 35 lbs. net weight, 42 lbs. shipping weight

RF-CDC1

### Cyclone Deluxe Dust Collector

The Deluxe Cyclone Dust Collector features a two stage, ultra-quiet, by-pass motor suitable for use with abrasive blasters, and includes a remote foot switch and mobile cart.

#### Specifications

- Unit size 12" x 12" x 19.5" high
- 115 volt, 60 Hz standard
- 230 volt, 50/60 Hz optional for export
- 42 lbs. net weight, 50 lbs. shipping weight

RF-CDC2

## Micromotor

### L50 Micromotor

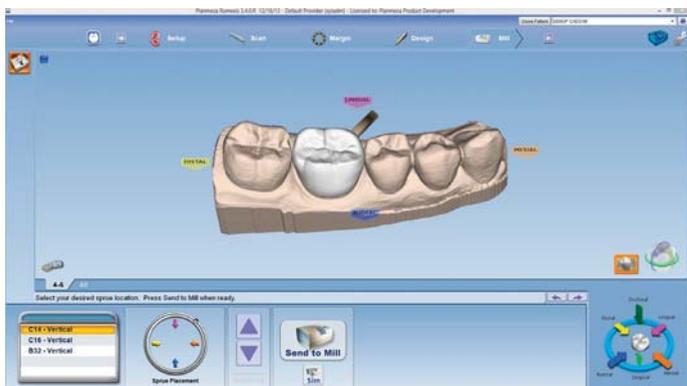

#### Brushless Micro-Motor Lab Set with Handpiece and Foot Control

- Power output of 7.8N maximum torque
- Auto-cruise, adjustable RPM of 50,000
- Lightweight at 3kg
- Suitable for right AND left handed users

BA-L50

## Planmeca PlanCAD® Easy **PLANMECA**

### Planmeca's easy and efficient design tool for prosthetic works

This open CAD software suite, designed especially for dentists, is the perfect tool for sophisticated 3D design and planning at the dental practice. The software is easy and fast to use and is ideal for designing prosthetic works from a single crown to 3 unit bridges.

Easy design of inlays, onlays, veneers, crowns and bridges

- Fully automated design from an anatomic tooth library
- Automatic adaptation to contact strength specified by user
- Cusps, marginal ridge and other anatomical shapes are taken to the design from the adjacent teeth
- Minimum material thickness is applied to the design for long-lasting results
- Design up to 16 teeth in the same session
- Superimposed camera view for easy marking of margins
- User-friendly tools to modify the shape and look of the design
- Automatic saving for flexible usage
- Only five steps from work description to milling

## 3Shape Full Contour **3shape**

### Full Anatomical Crowns and Bridges in a few clicks

Full digital crown production has grown explosively, driven by the success of full Zirconia, CAD Blocks, and an increasing demand for cost-efficient restorations. With 3Shape's new Smile Composer™, Auto Crown, and the extensive range of anatomy libraries - designing highly aesthetic and functional full anatomical crowns and bridges has never been easier.

## 3Shape TRIOS Design Studio **3shape**

### Provide same day dentistry with the Design Studio solution

Trios Design Studio software lets you easily design crowns and bridges, inlays, onlays and veneers. It includes Auto-crown design functionality and connection to a wide range of fully integrated milling machines. Open STL output enables use of any manufacturing option and connectivity to any milling centre.

- Easy crowns and bridges, inlays, onlays and veneers
- Auto-crown design functionality
- Open STL output for any manufacturing option or milling centre
- Connect to a wide range of fully integrated milling machines

## 3Shape Ortho Analyser **3shape**

### Software for orthodontic case analysis

- Combine CBCT scans with digital models
- Combine 2D images with 3D models
- 2D and 3D analysis orthodontic toolkit
- Share treatment plans
- Simulate orthodontic treatments
- Optimise occlusion in real time
- Customise treatment

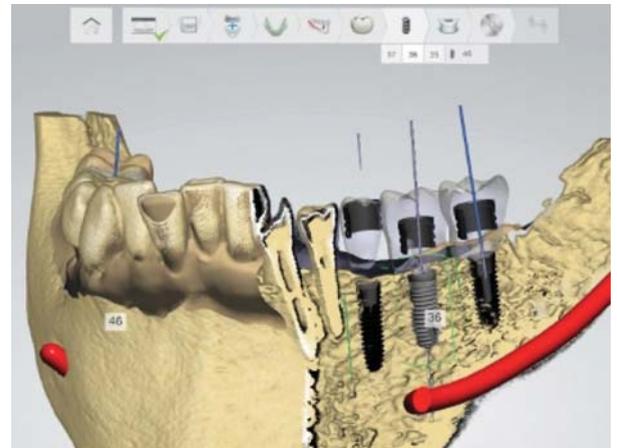

## 3Shape Implant Studio

### Digital accuracy and predictability, while improving the patient experience

Dental practices and labs use 3Shape Implant Studio™ for prosthetic driven implant planning and surgical guide design. Planning is based on optimal aesthetics, intended final restoration, available bone and the overall clinical situation. This solution increases treatment predictability and helps deliver a better outcome.

- Prosthetic driven planning
- Open system platform
- A flexible digital workflow
- Locally produce surgical guides at lower costs
- Flexible tools and features

## 3Shape Dental System – For the Laboratory

### A potent and dependable CAD/CAM solution that powers you past the competition

3Shape Dental System gives you the widest range of indications, tools and libraries. Providing integrated and intuitive workflows, a value-packed care program and an ecosystem that freely lets you combine what you use today with what you may need tomorrow.

#### Why choose Dental System:

#### Future proof solutions

- 3Shape innovation by over 275 developers
- Long-term sustainability of hardware and software
- 80 pending patents
- Unlimited software upgrades

#### Global customer care

- 100 Support & Training specialists in 13 countries
- Webinars & LABcare™ training packages
- 7 scanner service centers worldwide

#### More indications and better tools

- The widest range of indications including special types
- Powerful tools and design options
- Intuitive interface and guided workflows
- Complete order manager and 3D order form

#### Stronger ecosystem

- 70+ Implant libraries
- Extensive material & milling center libraries
- Broad integration with 3rd party mills, printers and IOS
- TRIOS® and integrated solutions

#### Integrated scanners and documented accuracy

- Complete scanner & software integration
- TRIOS® is an integrated digital colour impression solution
- Documented lab scanner accuracy according to ISO 12836
- Compliance with FDA 21 CFR part 820 and ISO 13485

#### Available add on's:

**Model Builder™** - allows technicians to design lab models for many indications including implant models directly from TRIOS® digital impression scans, 3rd party intraoral scans, and physical impression scans.

**3Shape Implant Bar and Bridge** - allows technicians to design sophisticated implant bars and bridges with the utmost precision. 3Shape's solution supports standard and free-form bar shapes for removable and fixed prosthesis, enables virtual design of gingiva and creation of any type of attachment.

**Abutment Designer** - simply model the anatomy first, then create the abutment and emergence profile with smooth transitions for optimal aesthetics.

**Removable Partial Design** – technicians start by designing the anatomies before the framework, thereby gaining accurate digital control over a technique-demanding process. Design both metal and flexible frameworks.

## Zirconia

### Zirlux 16+

The most comprehensive Zirconia portfolio available.

Zirlux 16+ offers dental labs a complete zirconia solution by combining unparalleled translucency and exceptional flexural strength to compliment the skills of a dental technician. Available in both pre-shaded and white discs, dental laboratories now have a choice of solutions for producing highly aesthetic, strong and consistent restorations.

## In-Ceram YZ T Disc

### Vita In-Ceram YZ T Disc Colour

Thanks to its remarkable strength (> 900 MPa), you can use VITA YZ T to fabricate delicate substructures for crown and bridge restorations with a high precision of fit.

When using VITA YZ T practices and laboratories can benefit from a system with matched components. In addition to the substructure material, it also includes colouring liquids, a veneering ceramic for individualisation and stains for shade characterisation.

## Katana Zirconia ML

*kuraray Noritake*

KATANA™ Zirconia ML Discs are the first polychrome high-performance zirconia blanks, which are manufactured with industrial scale and in exceptional constant quality.

This polychrome zirconia disc consists of four pre-coloured layers showing smooth enamel, dentin and cervical colour shifts. They can be used easily in the everyday milling process for laboratories with milling machines.

A natural tooth-like restoration can be achieved immediately within one step and a remarkable result with a natural gradient is performed. Without any further handcraft steps—like dipping, painting and drying -the sintering process can be started.

Thanks to the shortened manufacturing process the economical performance can be improved and possible complaints avoided.

KATANA ML: A-Dark

KATANA Zirconia ML and HT are suitable for:

- Full contour crowns and veneers
- Single unit copings
- Long-span bridges
- Inlays and onlays

# STML *Super Translucent Multi Layered*

STML has a well-balanced combination of translucency and mechanical properties. This version of KATANA™ has gradations of translucency as well as colour, exhibiting a masking effect in the cervical area. Using this series, you can easily obtain the desired shades to accommodate the variety found in prepared tooth conditions of clinical cases.

## ■ Concept of colour and translucency

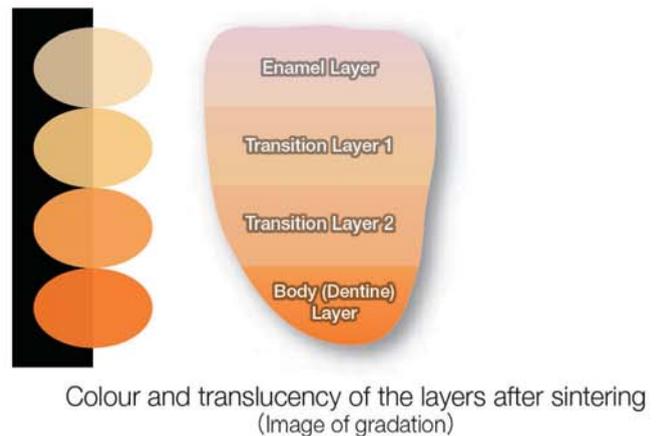

**Standard shade (NW, A1~A3.5)**

Translucency

Translucency is gradually decreased from the incisal to the cervical region to increase the masking level in the cervical region.

Colour

Colour of Shade Guide\*

\*NW : NORITAKE Shade Guide, A1~A3.5 : VITA Classical Shade Guide

**Range of masking level compared to the prepared abutment colours**

■ You can select a shade tab that corresponds to the final desired colour.

■ Select a shade tab one level brighter than the final colour. (It would be necessary to finish with external stains)

**■ Abutment colour examples**

Vita YZ Disc HT

**VITA**

Highly translucent VITA zirconia for monolithic bridge restorations VITA YZ HT is a highly translucent zirconia which is particularly suitable for monolithic bridge restorations due to its enormous strength (> 900 MPa) and excellent light refraction properties.

Thanks to high translucency, this zirconia material from VITA is a cost-effective, tooth-coloured and aesthetically appealing alternative material to traditional non-precious metal and partially veneered metal restorations.

When using VITA YZ HT, practices and laboratories can benefit from a system with matched components. In addition to the zirconia material, it also includes colouring liquids, stains and polishing instruments.

## Lava Plus

**3M**

Lava Plus High Translucency Zirconia offers the aesthetics of a layered restoration in all-zirconia that allows dentists and labs to create true restorative masterpieces. Lava™ Plus High Translucency Zirconia system offers all-zirconia restorations that exhibit accurate and vital colour match without compromising translucency and strength. Restorations can be either monolithic full contour or with a partial or full veneer.

### Benefits

- High strength allows tooth-preservation
- Scientific data proves Lava all-zirconia has antagonist preserving wear properties and is not abraded or roughened under occlusal load.
- Patented shading system enables highly aesthetic all-zirconia or traditional layered restorations.

### Indications for Use

- Single crowns ( Anterior and Posterior)
- Bridges up to 48mm in length with a maximum of two pontics next to one another in the posterior area and a maximum of four pontics next to one another in the anterior area. A maximum of four dies is approved for 5-unit and 6-unit bridges.
- Crowns on implants and 3-unit bridges on two implants. Lava Plus restorations on implants are contraindicated for patients with bruxism. Lava Plus restorations on implants should have a passive (tension-free) fit.
- Splinted crowns (maximum of 4 splinted crowns)
- Cantilever bridges with a maximum of 1 pendant at the position of a premolar or incisor. Cantilever bridges are contraindicated for patients with bruxism.
- 3-unit inlay/onlay and 2-unit or 3-unit Maryland bridges. Inlay/onlay and Maryland bridges are contraindicated for patients with bruxism.
- Zirconia build-up for two-piece abutments
- Primary crowns
- Always refer to the product instructions for use (IFU)

## Hybrid Ceramics

### Enamic Discs

Dental hybrid ceramic with dual ceramic-polymer network structure. To produce inlays, onlays, veneers, crowns, implant supported crowns in the anterior and posterior area as well as minimal invasive restorations in CAD/CAM systems.

#### Advantages:

- Combines the positive properties of ceramic and composite;
- High stress resistance and elasticity;
- Low brittleness and good abrasion characteristics;
- Precise, edge-stable and thus accurate milling results;
- Time-saving and tool-preserving processing;
- Excellent transparency for highly aesthetic results with a natural play of colours.

## Resin

### PMMA Discs

Suitable for fabrication of temporary crowns and bridges and for verifying the bridge on the plaster model in mouth before the final ZrO milling process. For temporary crowns and bridges, verification of the bridge on the plaster model/mouth, splint.

- Vicker hardness: 26,60 HV.
- Flexural strength: 114 Mpa.
- E-Module: 2771Mpa.
- Residual monomer < 1%.
- Diameter: 98.5 mm.
- Thickness: 12- 25 mm.

**PoliDent**

### CAD-Temp MultiColor **VITA**

#### Multi-layered composite blanks for the fabrication of long-term temporary restorations.

The proven CAD/CAM composite VITA CAD-Temp MultiColor is a cross-linked acrylate polymer with microfiller. VITA CAD-Temp was developed on the basis of the proven VITA tooth material. The MultiColor block has four layers of different shade intensity. CAD-Temp MultiColor ensures natural aesthetic results, in particular when fabricating long-term temporary anterior restorations.

#### Indications:

Full and partially anatomical crowns and bridges, in particular in the anterior area!

## Wax Discs

### CAD-Waxx

Filler-free acrylate polymer blanks, which burn without leaving any residue for the pressing and casting technique.

VITA CAD-Waxx is a filler-free acrylate polymer, which burns without leaving any residue. It is used for computer-aided fabrication of wax-ups for the pressing and casting technique and the fabrication of drilling templates for implant restorations. Moreover, CAD-Waxx enables CAD/CAM fabrication of temporary structure to check the fit.

#### Indications

Wax-ups for the pressing and casting technique, drilling templates, checking the fit.

## Lithium Silicate

### SUPRINITY

VITA

VITA Zahnfabrik offers VITA SUPRINITY, a new generation of glass ceramic material products. With the aid of an innovative manufacturing process, the glass ceramic is enriched with zirconia (approx. 10 % by weight). The result is the world's first zirconia reinforced lithium silicate ceramic (ZLS).

This new glass ceramic features a special fine-grained and homogeneous structure which guarantees excellent material quality and consistent high load capacity, as well as long-term reliability. Moreover, the material also offers outstanding processing characteristics such as easy milling and polishing. Thanks to the excellent translucency, fluorescence and opalescence of this new glass ceramic material, VITA SUPRINITY provides excellent aesthetic properties.

#### Indications

Various (aesthetic) options and hence wide indication range:

- Posterior crown
- Anterior crown
- Implant crown
- Veneer

### IPS e.max CAD for Planmill

IPS e.max® CAD is an innovative lithium disilicate glass-ceramic (LS2) for CAD/CAM applications. This unmistakable system combines highly aesthetic quality with exceptional user-friendliness. Unlike any other CAD/CAM material, IPS e.max CAD covers a comprehensive spectrum of indications. A wide range of translucency levels, shades and block sizes offers great flexibility.

IPS e.max CAD is milled in a "soft" intermediate state in which the material has a characteristic bluish colour. In a swift crystallisation process, IPS e.max CAD subsequently obtains its final high strength of 360 MPa and acquires the desired aesthetic properties, such as tooth colour and excellent translucency and brightness. Its success is based on many years of clinical experience and millions of restorations placed.

#### IPS e.max® CAD – The highlights:

- Most used lithium-disilicate glass-ceramic
- Outstanding aesthetics
- Comprehensive indication spectrum
- Scientifically and clinically proven
- Wide availability due to the CAD/CAM partner network (fabrication in-house and by authorised milling centres)

# Digital Materials - Blocks

## IPS e.max CAD for Planmill Low Translucency (LT)

The LT blocks are available in 16 A-D and 4 Bleach (BL) shades. Their low translucency - similar to that of natural dentine - renders these blocks suitable for creating large restorations (e.g. posterior crowns). The material exhibits true-to-nature brightness and chroma, which prevents the restoration from looking grey. The aesthetic appearance of the restoration is maximised with the cut-back technique.

## IPS e.max CAD for Planmill High Translucency (HT)

The HT blocks are supplied in 16 A-D and 4 Bleach (BL) shades. These high-translucency blocks that resemble natural enamel are ideally suitable for the fabrication of small restorations (e.g. inlays). Restorations made of HT blocks are characterised by their true-to-nature chameleon effect and the exceptional adaptation to the remaining tooth structure.

# VITA SUPRINITY<sup>®</sup> – Glass Ceramic. Revolutionised.

The new zirconia-reinforced high-performance glass ceramic.

3448 E

VITA shade, VITA made.

**VITA**

VITA SUPRINITY material belongs to the new generation of CAD/CAM glass ceramics. Now for the first time this innovative, high-performance material is reinforced with zirconia. This results in a high-strength material and processing safety coupled with an extraordinary degree of reliability. It

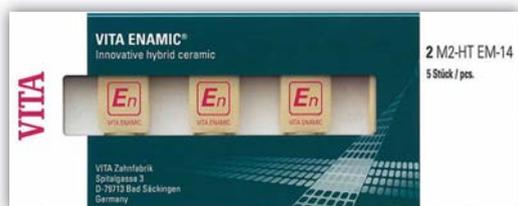

features a particularly homogeneous structure that ensures simple processing and reproducible results. And what's more, VITA SUPRINITY offers the benefit of a very wide range of indications. For more information visit: [www.vita-suprinity.com](http://www.vita-suprinity.com)  [facebook.com/vita.zahnfabrik](https://facebook.com/vita.zahnfabrik)

## Hybrid Ceramics

### ENAMIC Blocks

VITA

#### A new definition of resilience

VITA ENAMIC is the first hybrid dental ceramic in the world with a dual network structure that combines the best of what ceramic and composite materials have to offer. The CAD/CAM blocks are not only suitable for fabricating conventional inlays, onlays, veneers and crowns for anterior and posterior applications, but they can also be used for minimally-invasive restorations such as non-prep veneers and for restorations in areas where space is limited.

In addition to enormous resilience, this innovative hybrid material also ensures exceptional elasticity. Consequently, the material is perfectly suited for crown restorations in the posterior area and enables the reduction of wall thicknesses for minimally invasive restorations.

#### Advantages:

- Enormous Strength
- High reliability
- Tissue Friendly Restorations
- Precise and Extremely Accurate
- Fast and Efficient Processing
- Natural Tooth coloured results

Vita Enamic can be processed with Sirona CEREC or inLab MC XL system, software version V4.0 or higher. Now includes E4D Planmill and more.

### ENAMIC MultiColor Cerec Blocks

VITA

High aesthetics without individualisation!

Highly aesthetic versions of all the familiar advantages of VITA ENAMIC have been developed: a new integrated natural colour gradient in six finely nuanced layers, from neck to incisal, is now available. The result is VITA ENAMIC MultiColor! Even without individualisation, this material with dual network structure ensures highly aesthetic monolithic single-tooth restorations for front and side teeth. Aesthetic rehabilitations can be conducted faster and easier in the digital workflow, making them more interesting for a larger patient group.

## CERASMART

GC

A force-absorbing hybrid ceramic block for CEREC or Planmill milling machines. The genius behind GC's force absorbing hybrid ceramic is the development of a unique technology to manufacture a block with high density of ultrafine glass particles. Uniform dispersion (very short inter-particle distance) of individually silanated and bonded particles is key to delivering CERASMART's exceptional strength, polish retention and wear resistance.

CERASMART not only looks incredible, but also sets the new standard for hybrid ceramic's strength, fracture toughness and wear resistance.

Core to its exceptional physical and aesthetic properties is a hybrid structure containing a high density of ultrafine glass particles. This structure allows light movement that brings natural opalescence and translucency as well as a high gloss finish that lasts.

# Digital Materials - Blocks

## Lava Ultimate

The world's first resin nano ceramic material, Lava™ Ultimate Restorative is designed for precision, speed and single-appointment efficiency. Because the resin nano ceramic material is less brittle than glass ceramic, it resists chipping and cracking when milled. CEREC dentists and other chairside CAD/CAM dentists can achieve better edge quality and smooth margins for a brilliant restoration that feels as natural as it looks. There's no post firing, so the restoration is finished faster. Simply polish to a high-quality luster. It's an advance that will improve your productivity and create a better experience for your patients.

### Indications

- Onlays
- Inlays
- Veneers

Nanotechnology and proprietary curing treatment create a unique hybrid material that offers the benefits of both glass ceramic and resin materials:

- High flexural strength (200 MPa) adds durability to posterior restorations.
- Excellent wear resistance.
- Less wear to opposing enamel than glass ceramics.
- Brilliant and long-lasting polish.

## Feldspathic Glass Ceramics

### Vitablocs Mark II Cerec Blocks

VITA

Fine particle feldspar ceramic for inlays, onlays, full and partial crowns in the anterior and posterior area. Highly translucent monochromatic blocs guarantee excellent shade matching with the patients remaining tooth structure. Clinically proven with over 20 years of documented success.

Mandrel fits both MC XL and Compact Milling units.

### IPS Empress CAD Blocks for Planmill

ivoclar  
vivadent

IPS Empress® CAD is the aesthetic leucite-reinforced glass ceramic for the efficient fabrication of single-unit restorations through Planmeca chairside CAD/CAM technology. By optimising the manufacturing process, a material was created with a more homogeneous leucite crystal distribution providing a glass ceramic with an increased flexural strength of 160 MPa.

As you review this material, you will be amazed by the variety of block sizes and shades. Now you can select the right block for the right clinical indication without compromise. With IPS Empress® CAD, we have expanded the number and combinations of translucencies and all shades.... 33 in all. The IPS Empress® CAD is offered in the A-D shade range with four bleach shades in various sizes.

# Digital Materials - Blocks

## IPS Empress CAD Low Translucency (LT)

Features a lower degree of translucency, making them ideal for most full coverage restorations (e.g. full crowns, large partial coverage restorations, and veneers).

The IPS Empress® CAD LT blocks are less translucent, which makes them appear higher in value, therefore resulting in a brighter restoration.

## IPS Empress CAD High Translucency (HT)

Features a high degree of translucency, making the IPS Empress® CAD HT blocks ideally suited for the fabrication of smaller restorations (e.g. inlays and onlays, veneers).

Restorations fabricated with the IPS Empress® CAD HT blocks demonstrate a true-to-nature chameleon effect and outstanding adaptation to the residual tooth structure. The blocks simulate the life-like fluorescence in order to permit optimum integration into the natural residual tooth structure.

# Digital Materials - Blocks

## IPS Empress CAD Multi

With multiple translucencies and a balanced blend of chroma from gingival to incisal, IPS Empress® CAD Multi offers dental professionals a fusion of colour that provides the natural gradients to replicate dentin and enamel in a single block. With the proven high strength (160 MPa) of IPS Empress® CAD leucite reinforced glass ceramic, the IPS Empress® CAD Multi can be either polished or glazed in the Programat® CS furnace to obtain maximum functional and aesthetic results.

The IPS Empress® CAD Multi features a transition of fluorescence very similar to that of natural teeth, which results in excellent integration into the dentine area. This innovative combination of shade transition, translucency and fluorescence allows you to create highly aesthetic restorations easily.

IPS Empress® CAD Multi is available in the most popular A-D shades and two bleach shades. They are ideal for the fabrication of full and partial coverage restorations as well as veneers offering multiple types of restorations in one block.

## BRILLIANT Crios Cerec Blocks COLTENE

### Reinforced Composite

- High flexural strength for resistant restorations
- Tooth-like modulus of elasticity for a shock-absorbing effect and pleasant bite feeling

### Tooth-Like Behaviour

- Blends in extremely well to provide natural aesthetics
- High wear resistance and low abrasion on antagonist

### Efficient Handling

- No firing process required
- Can be modified and repaired
- Exceptional grinding precision for more freedom of preparation
- Effortless polishing for fast gloss

### Reliable Luting System

- Secure bonding due to ONE COAT 7 UNIVERSAL
- Suitable luting material for every situation

### Crios Block Pkt of 5

## AKZENT Plus Mini Kit

VITA

For surface characterisation, fine glazing and internal staining of restorations. The stains are available as powder or ready-to-use pastes depending on processing preference, habit, and area of application. Suitable for layer and press ceramic, feldspar porcelain blocks like Vitablocs, and monolithic restorations. Special low-melting glaze porcelain available for porcelains with a firing temperature of less than 850 °C.

### Complete Kit V-BAPKSK

**Includes:**  
EFFECT STAINS 3g 1 x each of - ES01, ES05, ES06, ES11, ES13,  
5 x 1 Glaze LT Powder, 1 x 20ml Powder Fluid,  
1 x Shade Sample Disc, 1 x Mixing Plate,  
1 x Crystal Glass (70 x 95 mm), 1 x Brush No. 3

## OPTIGLAZE Color

GC

OPTIGLAZE™ Color is a revolutionary nano-filled, characterisation material developed specifically to add colour, surface gloss and high wear resistance to indirect composite and acrylic restorations including chairside-milled hybrid ceramic restorations, acrylic dentures, artificial teeth and PMMA type materials.

You can now change shades, create effects, shift value, characterise and glaze all your resin type prosthetics in no time at all.

Best of all, OPTIGLAZE™ Color gives you beautiful aesthetic restorations that will last longer due to the superior wear resistance achieved from GC's innovative single dispersion nano-filler technology.

## Initial IQ - Lustre Pastes NF GC

Lustre Pastes NF are 3-dimensional ceramic stains developed to bring improved colour depth and lifelike translucency to all ceramics in the GC Initial range.

Although developed for the Initial IQ Press-over and Layering systems, Lustre Pastes NF can be used with the complete range of the GC Initial family because they match both 'low' and 'high' CTE ceramics.

Lustre Pastes NF are available in ready-to-use jars and, thanks to the special refreshing and diluting liquids, an optimal consistency of the pastes is always guaranteed.

Lustre Pastes NF are based on fine ceramic particles and can be applied in a thicker layer in which they exhibit unsurpassed vitality and create a natural glaze on all restorations.

### Basic Refills: 4g

L-9 Value	GC-876414

### Complete Kit GC-877078

#### Includes:

1 x Neutral (4g), 1 x Value (4g), 4 x Body Shades (4g – A, B, C, D), 8 x Enamel Effect Shades (4g – Vanilla, White, Light Grey, Dark Grey, Light Blue, Dark Blue, Incisio, Olive), 1 x Diluting Liquid (8ml), 1 x Refreshing Liquid (8ml), 1 x Mixing dish, 2 x Brushes, 1 x Directions for use (pictorial)

### Features

- What you see before firing is what you get after firing
- High fluorescence ensures the look of natural teeth
- Wide CTE range – between 6.9 and 13.3 – in order to work with nearly all types of ceramic
- Thixotropic property for easy and precise application
- Available in convenient ready-to-use jars
- High wear-resistance

## Layering Ceramic

### VITA VM® 11

Vita VM 11 is a low-melting, fine-structure feldspar ceramic that is adapted specifically for the individualisation of restorations made of zirconia-reinforced lithium silicate glass ceramic. The optimum correspondence of both CTE ranges guarantees a bond that is tension-free, and in turn also reliable.

In combination with VITA SURPRINTY, you can begin layering directly without liner firing or washbake, thanks to the excellent surface wettability of the new glass ceramic.

The high translucency and warm shade reproduction of VITA VM11 combined with the opalescent effect of VITA SURPRINTY facilitate highly aesthetic results with a vivid play of colours.

# CAD/CAM Accessories

## VITA VM® 9

VITA VM 9 is a highly-aesthetic, fine-structure feldspar ceramic that is perfectly adapted to the CTE value of zirconia frameworks (approx. 10.5, such as VITA YZ) – regardless of whether they are white, coloured or translucent.

In addition, you can also use VITA VM 9 for individualising restorations made from VITABLOCS MARK II and VITA PM 9 press ceramic pellets. The main components are pure-grade potash and albite feldspar materials that offer brilliant shade effects as well as optimum physical properties, such as extreme flexural strength values.

Thanks to its homogeneous, compact surface, VITA VM 9 supports outstanding grinding and polishing, particularly in situ. This results in smooth and densely compact surfaces.

Accumulation of plaque on the ceramic surface is significantly reduced, supporting the patient in caring for their high-quality restoration.

VITA VM 9 is a high-quality system component provided by the innovative VITA VM concept – the universal solution for all common indications. Metal-ceramics, all-ceramics or composite: the possibilities are endless!

VITA AKZENT Plus and VITA INTERNO stains are also available for individual finalisation.

## Lava Plus High Translucency Zirconia Dyeing Liquids

**3M**

3M patented shading technology delivers consistent colour. Developed specifically for a consistent colour match to VITA Classical shades, Lava Plus High Translucency Zirconia Dyeing liquids are available in each VITA Classical shade plus two bleach shades. For popular VITA 3D-Master® shades, 3M ESPE provides a conversion chart to ensure you can deliver an accurate match. Your high strength, translucent restorations will have a warm and natural aesthetic appearance because the shading liquid is completely absorbed and provides colouration throughout the restoration.

## Chairside Finishing & Polishing

### ENAMEIC Polishers

2 part polishing system consisting of 8 polishers

The VITA ENAMIC polishing sets were developed for reliable, efficient and material-specific surface treatment of hybrid ceramic restorations in dental practices and laboratories. The sets include various polishing instruments for pre and high-gloss polishing. These instruments are suitable for careful and gentle polishing of occlusal surfaces, cusps, fissures and contact points of the restoration and produce surfaces with exceptional gloss.

Clinical V-EENPSETC  
Technical V-EENPSETT

### SUPRINITY Polishers

For simple pre- and high-gloss polishing of VITA SUPRINITY

Sets include various polishing instruments for pre and high-gloss polishing. These instruments are suitable for gentle polishing of occlusal surfaces, cusps, fissures and restoration contact points. They ensure a brilliant shine on the finished restoration.

Clinical Set of 6 V-ELSPSETC  
Technical Set of 6 V-ELSPSETT

### Diapol

Applications:

- Porcelain
- Metal

Characteristics:

- For corrections without additional glazing
- Diamond abrasive for effective polishing

## Expert Ceramic Inlay and Partial Crowns Set

Designed by European experts to simplify and systemise the precise shaping of cavities prior to receiving ceramic inlays and partial crowns.

Includes 3 specially developed tools made with **depth-markers** to **GUARANTEE** the required minimum occlusal thickness of ceramic restorations.

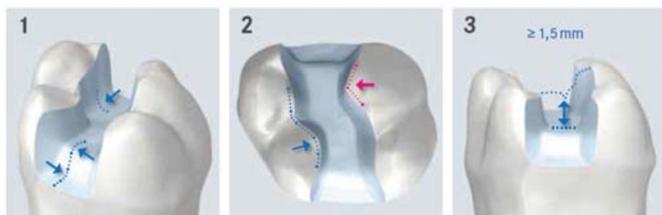

D6847KRD314016X5

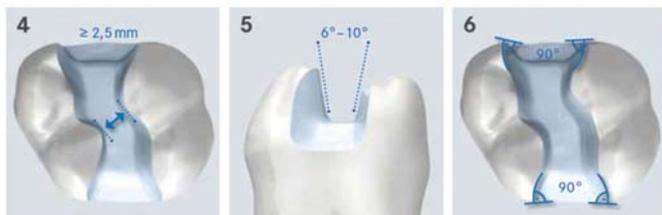

D959KRD3214018X5

D845KRD814025X5

Illustrations of the most important rules to be observed during preparation.

**K-4562ST**  
Set of 10 Friction Grip Diamond burs in Stainless Steel block. Block suitable for sterilisation.

More information on Komet website.

## Expert Ceramic Crown Prep Set

The key instrument in this set is the 856 (tapered round, available in different sizes and grits) which is perfectly suited for preparing a distinct chamfer featuring rounded interior edges.

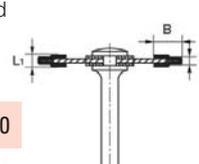

**K-4573ST**  
Set of 9 Friction Grip Diamond burs. Stainless Steel Block suitable for sterilisation.

D6856314021X5

## Diamond Cutting Disc

Flexible, double-sided disc for ceramics.

Each D911104220

## Ceramic Cutter for Acrylics

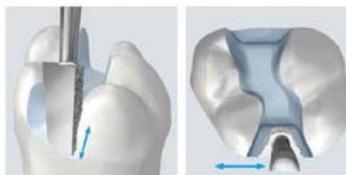

Ceramic construction minimises heat and clogging for maximum durability and cutting.

Each K-K261GSQ104023

## CAD/CAM Diamond Sonic Tips

Ideal interproximal cavity Preps for all CAD/CAM systems – for perfect restoration margins. For use with KaVo SonicFlex Scaler.

Each Mesial Tip #34 KV-1.002.1984  
Each Distal Tip #35 KV-1.002.1986

## Zirconia Crown Cutter

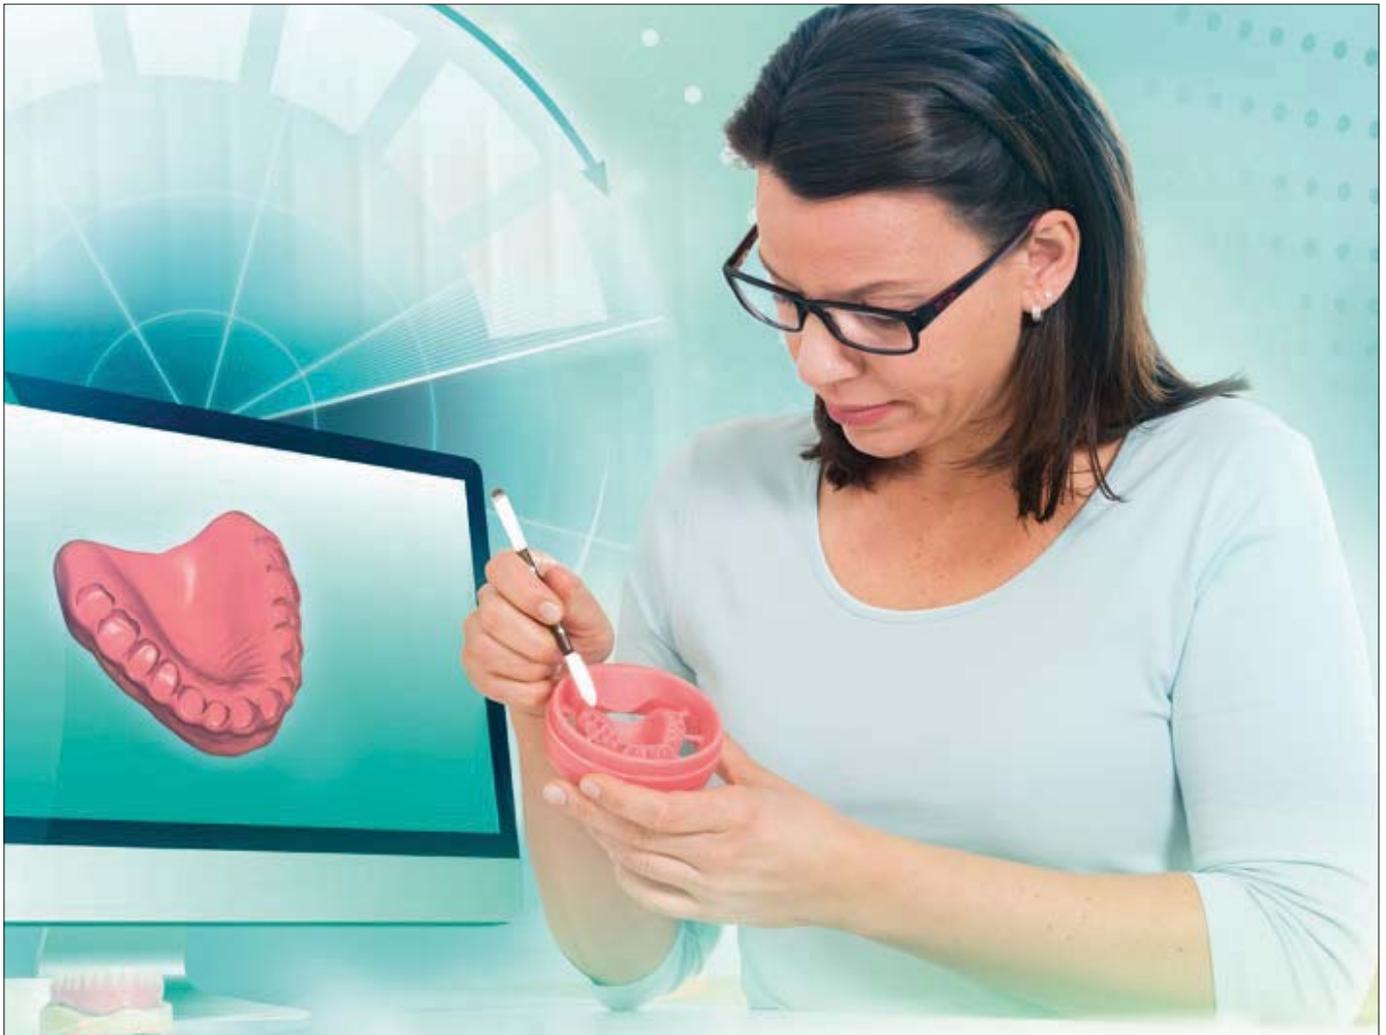

Developed especially for this tedious and material wearing work. Special Diamond bonding for superior substance removal. Recommended for use in Redbands. Very long service life.

Each D4ZR314012X5

VITA shade determination

VITA shade communication

VITA shade reproduction

VITA shade control

VITA shade, VITA made.

**VITA**

VITA VIONIC SOLUTIONS enables the efficient fabrication of CAD/CAM wax setups. First, a time-saving, digital prosthetic setup is generated using CAD software. Second, a precise wax base or a fully formed wax setup made from VITA VIONIC WAX is produced from the denture design

via CAM technology. Once a successful try-in is completed, the denture is conventionally produced in the final stage. With VITA VIONIC, laboratories benefit from higher levels of precision while saving time.
